1. Business Analytics
A practice that includes using data and statistics to analyse a company's performance and make business decisions.

2. Data Analytics.
a process of inspecting and processing raw data to find useful insight inside it. Unlike Business analytics, it focuses on the technical aspect rather than applying findings to business strategy.

3. Business Intelligence.
A system of tools used to collect, store and present historical business data in visual formats, such as dashboards, often describing what happened.

4. A management approach where business decisions are based on data and evidence ~~not~~ rather than intuition or assumptions.

5. Big Data.
A high volume of data, that involves complex datasets that cannot be processed by traditional tools or methods.

6. Descriptive Analytics.
A type of data analysis that summarises historical data and statistics to predict what is going to happen in the future.

7. Diagnostic Analytics
A type of analytics that goes beyond describing what happened to investigating the root cause, ~~examine~~ e.g examining relationships between different variables to explain why a result occurred.

8. Predictive Analytics
A method that uses historical data and statistical models to predict what is going to happen in the future.

9. Prescriptive Analytics.
An analytical method that is so advanced it predicts what will happen in the future and also recommends a specific action in response to the prediction.

10. Data Literacy - The ability to read, interpret, communicate meaningfully using data, understanding what numbers mean and what conclusions can be drawn from them.

Section 2

11. Structured data - data that is organised in a fixed format of rows and columns, making it easy to process data in a data storage system.

12. Unstructured data
Data that has no predefined format or structure, making it hard to process using traditional tools.

13. Data Warehouse
A centralized storage system where a company combines large volumes of data from multiple ~~process~~ sources, designed for analysis rather than day to day operations.

14. Data Mining
The process of searching through data large sets, using algorithms and statistical methods to discover hidden patterns, correlations and insights

15. Data Visualisation - The representation of data in graphical formats, such as charts, graphs and infographics - to make complex information easier to understand at a glance.

16. Dashboard - A visual real-time display that consolidates key business metrics into a single screen. allowing quick monitoring and performance.

17. Metric - a quantifiable measure used to track an organisation progress towards a specified goal.

18. Key Performance indicator - a metric that is tied to a strategic business goal and used to measure progress towards that goal.

19. Benchmark - a point of reference or standard figure used to measure ~~your~~ performance against, It can be an average figure or a competitor's performance or own past performance.

20. Segmentation - process of dividing a customer base into distinct groups that share common characteristics, so each group can be targeted with relevant messages.

Section 3

21. Conversion Rate - percentage of people who complete a desired action out of the ones who had an opportunity to do so.

22. Customer Acquisition Cost - The total amount of money a business spends on sales and marketing to get a new customer.
